# **(A)** audio-technica

Cardioid Condenser Boundary Microphone with Local or Remote Switching

unipoint® microphones

#### **Features**

- Activation switch can be set to any of three operating modes: "press-on/press-off," "press-to-talk" and "press-to-mute"
- External contact closure capability permits control of remote devices from microphone switch
- External LED control allows for accurate depiction of the live status of the microphone
- PivotPoint® rotating output connector allows cable to exit from either the rear or the bottom of the microphone
- UniGuard® RFI-shielding technology offers outstanding rejection of radio frequency interference (RFI)
- UniSteep® filter provides a steep low-frequency attenuation to improve sound pickup without affecting voice quality
- Available interchangeable elements permit angle of acceptance from 100° to 360°
- Heavy die-cast case and non-slip silicone foam bottom pads minimize coupling of surface vibration to the microphone

#### Description

The U891RCx is a wide-range condenser microphone with a cardioid polar pattern. It is designed for surface-mount applications such as high-quality sound reinforcement, conferencing, distance learning and other demanding sound pickup applications.

The microphone features an activation switch, a programmable external contact closure and an LED indicator. The activation switch can be set to any of three operating modes: "press-on/press-off," "press-to-talk" and "press-to-mute." The microphone's external contact closure capability permits control of remote devices. The contact closure can also be configured to operate independently of the microphone element for applications that require a constant signal from the microphone element. A switch on the bottom of the microphone allows selection of local or remote operation. (In remote operation, the LED and activation switch operate independently of the microphone.) A third position on this switch enables the LED to be controlled from an external source.

The microphone requires 11V to 52V phantom power for operation.

The microphone is equipped with UniGuard® RFI-shielding technology, which offers outstanding rejection of radio frequency interference (RFI).

The microphone's cardioid polar pattern provides a 120° angle of acceptance (cardioid in hemisphere above mounting surface). Additional interchangeable elements with omnidirectional (360°) and hypercardioid (100°) pickup patterns are available.

The microphone includes a 7.6 m (25') output cable terminating in a special TA5F-type connector at the microphone end. The equipment end is stripped and tinned for connection to an electronic device. The microphone is equipped with Audio-Technica's unique PivotPoint® rotating output connector.

A switch permits choice of flat response or low-frequency roll-off (via integral 80 Hz high-pass UniSteep® filter) to help control undesired ambient noise.

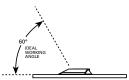

The microphone's heavy die-cast case and non-slip silicone foam bottom pads minimize coupling of surface vibration to the microphone. The microphone includes a soft protective pouch and features a low-reflectance black finish.

#### **Installation and Operation**

The U891RCx requires 11V to 52V phantom power for operation.

The electronics in the microphone take up to 30 seconds to stabilize after power is applied; during this start-up period, some sonic disturbances may be heard upon switching if the system is "live."

The microphone should be placed on a flat, unobstructed mounting surface, with the front of the microphone facing the sound source. The sound source should not be below, or higher than 60° above, the plane of the mounting surface.

The microphone features an activation switch, indicator LED and external contact closure ability for controlling remote devices. The microphone offers three choices of switching modes. The SW. FUNCTION switch located on the bottom of the microphone selects the desired mode. TOUCH ON/OFF: Press the on/off switch once to turn the microphone on; press again to turn off. MOM. ON (momentary on): Microphone is on only while the switch is being pressed ("press to talk"). MOM. OFF (momentary off): Microphone is off only while the switch is being pressed ("press to mute"). The indicator LED and external contact closure follow the operation of the activation switch when in the local mode. For applications that require the microphone to remain active or always "on," regardless of the activation switch setting, a "Local/Remote/ LED Remote" control function is provided.

- When the CONTROL switch (located on the bottom of the microphone) is in the "Local" position, the activation switch controls the microphone's audio output, LED status and contact closure internally.
- When the CONTROL switch is in the "Remote" position, the microphone's audio output remains active or "on" all the time. The activation switch controls only the LED and contact closure.
- When the CONTROL switch is in the "LED remote" position, it allows remote control of the LED, for accurate depiction of the microphone's live status. The LED will remain "on" when driven logic high or open, and "off" when driven logic low or connected to ground. The microphone's audio output remains active or "on" all the time, and the contact closure follows the configuration of the activation switch. \*Refer to the table for switch/LED/closure states.

Output is low impedance balanced. The signal appears across the red and yellow wires; audio ground is the shield connection. Output is phased so that positive acoustic pressure produces positive voltage on the yellow wire. The small-diameter black and blue wires are the contact closure. The white wire is the external LED control.

An integral 80 Hz high-pass UniSteep® filter provides easy switching from a flat frequency response to a low-end roll-off. The roll-off position reduces the pickup of low-frequency ambient noise (such as traffic, air-handling systems, etc.), room reverberation and mechanically coupled vibrations. To engage the UniSteep® filter, slide the switch toward the "bent" line.

The microphone's PivotPoint® rotating output connector allows the cable to exit from either the rear or the bottom of the microphone without the need for tools or disassembly.

Avoid leaving the microphone in the open sun or in areas where temperatures exceed 110° F (43° C) for extended periods. Extremely high humidity should also be avoided.

Note: Audio-Technica has developed a special RFI-shielding mechanism, which is an integral part of the connectors in the UniPoint® line. If you remove or replace the connector, you may adversely affect the unit's RFI immunity. Audio-Technica offers a crimp tool (ATCT) and RFI shields that enable you to shorten the cable and correctly reinstall the connector while maintaining the highest level of RFI immunity.

Note: Placing any object on a surface (such as a conference table) before its finish is fully cured may result in damage to the finish.

#### **Architect's and Engineer's Specifications**

The microphone shall be a fixed-charge condenser designed for use in surface-mount applications. It shall have a cardioid polar pattern with a uniform 120° angle of acceptance (cardioid in hemisphere above mounting surface) and a frequency response of 30 Hz to 20,000 Hz. It shall be capable of accepting optional interchangeable elements for additional polar patterns. It shall operate from an external 11V to 52V DC phantom power source. The microphone shall be capable of handling sound input levels up to 130 dB with a dynamic range of 104 dB. Nominal open-circuit output voltage shall be 19.9 mV at 1V, 1 Pascal. Output shall be low impedance balanced (200 ohms). It shall offer outstanding rejection of radio frequency interference (RFI).

The microphone shall feature an activation switch, an indicator LED and an external contact closure output for controlling remote devices. The microphone shall offer three choices of switching modes: press-on/pressoff, momentary on, momentary off. A three-position "Local/Remote/LED Remote" control function switch shall be provided on the microphone.

The output of the microphone shall be a TB5M-type connector. A 7.6 m (25') miniature output cable with a TA5F-type connector at microphone end shall be supplied. The output end of the cable shall have stripped and tinned color-coded leads for connections. The microphone shall include a switch to permit choice of flat response or 80 Hz low-frequency roll-off.

The microphone shall have a maximum width of 84.0 mm (3.31"), a maximum length of 108.0 mm (4.25") and a maximum height of 23.0 mm (0.91"). Weight shall be 266 grams (9.4 oz). The microphone shall be housed in a die-cast case with a perforated steel grille. Finish shall be low-reflectance black. The microphone shall include a soft protective pouch.

The Audio-Technica U891RCx is specified.

#### **Switch Settings and Functions**

#### **CONTROL** Switch in "Local" Position

| SW Setting   | Microphone Audio             | LED                          | <b>External Contact Closure</b> |
|--------------|------------------------------|------------------------------|---------------------------------|
| TOUCH ON/OFF | Follows activation switch    | Follows activation switch    | Follows activation switch       |
| MOM. ON      | "On" when switch is pressed  | "On" when switch is pressed  | Closed when switch is pressed   |
| MOM. OFF     | "Off" when switch is pressed | "Off" when switch is pressed | Open when switch is pressed     |

#### **CONTROL** Switch in "Remote" Position

| SW Setting   | Microphone Audio | LED                          | <b>External Contact Closure</b> |
|--------------|------------------|------------------------------|---------------------------------|
| TOUCH ON/OFF | Always "On"      | Follows activation switch    | Follows activation switch       |
| MOM. ON      | Always "On"      | "On" when switch is pressed  | Closed when switch is pressed   |
| MOM. OFF     | Always "On"      | "Off" when switch is pressed | Open when switch is pressed     |

#### **CONTROL Switch in "LED Remote" Position**

| CONTINUE OWIGHT IN LED HOMOTO TOSITION |                  |                     |                                 |  |
