

Dana B. Goods Product Info Sheet

T-Rex Reptile

The Reptile is the coolest modulating analog delay you will most likely ever play! Not only is it a very warm delay, but the modulation capability makes this single pedal incredibly versatile. With pedal board real estate at a premium these days you need the Reptile!

The Reptile features:

- Echo, Repeat and Time controls for the delay
- Depth and Speed controls for the modulation effects (the mini knobs light up when the modulation function is engaged)
- On/Off footswitches for the delay and modulation effects
- Side-mounted input gain control with LED for peak level monitoring

Depth Control:
Adjusts width of the
modulation wave

Speed Control:
Adjusts how fast the modulation
wave moves

Echo Control:
Adjusts how loud the
repeats are in relation to
the original sound.

Repeat Control:
Adjust how many repeats
there are

On/Off Footswitch for
Delay (with LED indicator)

Output Level Control

Input Gain Control:
Keeps signal chain clean
and balanced. LED peak
level indicator is next to
push-in knob.

Time Control:
Adjust the length of time
between repeats.

On/Off Footswitch for
Modulation
