

KEMPER PROFILER

THE COMPLETE AMP-COLLECTION

NOW AVAILABLE WITH
OPTIONAL BUILT-IN POWERAMP

YOUR COMPLETE AMP COLLECTION IN ONE DEVICE

THE AWARD-WINNING, HIGHLY ACCLAIMED KEMPER PROFILER.

It contains your entire amp collection: the amps you own, the best sounding amps from top guitarists the world over, and amps from studio-cats who live for that perfect recording room, ultimate mic position, and purest possible signal chain.

The Kemper Profiler can capture the sonic DNA of a guitar amp with the press of a single button. But, so you don't have to, the best amps in the world come pre-installed, ready to bring their legendary tone and feel to your fingertips. Ready to take you from Nashville, thru London, to LA. Ready to take you on a trip of tonal bliss from Alternative, thru Metal, to Country - with a pit stop at Experimental.

Visit www.kemper-profiler.com to learn about who's playing this amazing box, who's touring with it, on which records you can hear it, and most importantly: where you can check one out for yourself.

THE KEMPER PROFILER

ANY AMP TONE YOU WANT. HERE. NOW. ANYTIME. ANYWHERE.

For decades, the electric guitarist has been shackled to the tube amplifier as the only solution to get “that sound”. With the advent of the Kemper Profiler, everything has changed. Now, for the first time, you are free to create amp tones as unique and individual as you, and capture them perfectly into the digital domain.

“Profiling” is the name we have given our proprietary technology that captures the sound and feel of a tube amplifier. The resulting profiles go far beyond a list of static, digital amp models - profiling creates a vivid, dynamic and multi-dimensional reproduction of your existing tube amp.

Profiling an amp is as simple as plugging it in and pressing “record.” Just insert it into the recording chain, sit back, and watch the magic. Test signals will be sent from the unit into your tube amp and recorded by the microphone in front of your cabinet. Less than a minute later, the sonic DNA of your tube amp has been extracted.

Use the A/B mode to compare the original tube amp with the profiled sound. The “Refine” feature lets you fine-tune the nuances of your profile by simply strumming a few chords - a fast and convenient way to tweak the profile to perfection.

The four stomp slots let you choose from traditional drive pedals, wahs and EQs, as well as more exotic effects like frequency shifter and wave shaper. Post-amp, you can add up to four stereo effects, including various reverbs, delays and modulation effects. Many effects have a built-in “Ducking” parameter - just find your perfect setting, then store it for easy recall as an effect preset.

THE KEMPER PROFILER IN A NUTSHELL

1 STOMP EFFECTS

The Kemper Profiler offers 4 independent stomp slots, armed to the teeth with a stunning arsenal of effects. These include models of famous overdrive and distortion stomps, compressor, reverb, several delays and LoFi algorithms, and a beautiful rotary speaker emulation.

2 THE ARCHIVE

The Kemper Profiler makes it easy for you to share your personal library with other users. It already holds a vast number of rigs. Sharing a profile or rig is as easy as sending an e-mail.

3 PROFILING

Amplifier profiling is a new and unique way to extract the sound and feel of a tube amp and store it away for later use. Profiling doesn't just create a static snapshot; it can give you a deeper control of your sound than your original amp can provide. The response to your playing, dynamics and all other details are captured by the profiling process.

4 THE INPUT STAGE

Thanks to a Hi-Z input optimized for passive guitar pickups, the Kemper Profiler offers a crystal clear signal path.

5 THE STACK

The Stack section of the Kemper Profiler consists of the profiled amplifier, equalizer and cabinet. You can mix and match any amp with any cabinet in your library. You can even creatively change the sonic behaviour of any recently profiled amplifier.

6 MASTER FX

The master effects section features reverb, delay and additional slots for stomp boxes to refine your amplifier's tone. The six knobs on the front panel offer convenient access to the most important settings. The reverb section features a dense and lively reverb algorithm which won't mask the original signal. The delay section features several tape and stereo delay algorithms which can be synced to MIDI clock.

7 THE AMP CONTROLS

The Kemper Profiler includes the standard Gain, Bass, Middle, Treble and Presence controls that you would expect from a guitar amplifier. However, in contrast to many vintage amps, we have kept the gain control neutral, so you are able to find the sweet spot of your amp, and run this optimal sound at any gain level.

OPTIONAL POWERAMP
AVAILABLE

ALL YOUR TONES TO FIT WITH YOUR TOURING GEAR

THE KEMPER PROFILER RACK.

We listened, and here it is: the entire Kemper Profiler in a rack-mount just 3 units high. Featuring a user interface almost identical to the the lunchbox version, the Kemper Profiler Rack is just as easy to operate. The layout is highly intuitive and already familiar to users of more traditional amps.

The most important parameters, such as gain, tonestack and volume, are directly accessible. There are even dedicated knobs to control the reverb and delay from the front panel.

WHO'S DRIVING THE CAB? YOU DECIDE!

DRIVES BOTH GUITAR AND FULL-RANGE CABINETS.

What about those occasions when you just want to play through a standard guitar cab? Our unique CabDriver mode retains the characteristics of the tube power-amp, including the original amp/speaker interactions, and translates them perfectly to the speaker cabinet. No additional tweaking required.

Prefer to feed a full-range monitor system? No problem - we gave the Kemper Profiler some of the most complete output options available in a guitar amplification system. To get the perfect "amp-in-the-room" sound on the stage, or in the rehearsal room, simply feed the monitor output signal into any neutral, solid-state power amp driving a standard guitar cabinet. And now for the nifty bit: you can still run the full profile to the main PA, while CabDriver feeds to your speaker cabinet on stage.

All this makes the Kemper Profiler the perfect, all-in-one solution for any guitar player who travels from rehearsal room, to studio, to stage. We provide the flexibility and convenience - the choices are all yours.

BUILT-IN POWER AMP.

Introducing the PowerHead and PowerRack. 600 Watts* of amplification for your Kemper Profiler. No additional equipment - drive any speaker system you like, straight out of the back.

*(600W @ 8 Ohm / 300W @ 16 Ohm).

SOME USER'S POETRY

»For the first time ever, you can take all your amps to a gig, and get the exact same sound as mic'ing your cabinets on stage. The moment you make your first profile and A/B it with the real amp, your mind will be blown.

Only if you have ears of stone, might this not be the product for you. But if your pick speaks from whispers to screams, and if you can feel the mojo of high-end amps, whether classic or boutique, then the Kemper Profiler will put a huge smile on your face.«
