

SUPERFUZZ

User's Manual

Voodoo Lab Guitar Effect Pedals are handcrafted from the finest modern and vintage components. They are housed in rugged aluminum cases with heavy duty metal switches. True bypass switching is used for absolutely no loss of tone when the pedal is bypassed. These are the finest effect pedals a musician can buy. All Voodoo Lab products are manufactured in the U.S.A. by Digital Music Corporation. For more information about Digital Music and Voodoo Lab products, please visit our web site at www.voodoolab.com.

Description

The problem with most fuzz pedals is that you just get one sound, like it or not. And at less than “Plexi on 10” volumes they tend to sound thin. The Voodoo Lab Superfuzz is designed to provide a wide variety of vintage and modern tones that are usable over a range of volume levels. This is accomplished by taking a classic ‘60s fuzz design and adding unique resonance and tone circuits.

Operation

- 1. Attack:** This is the gain. Turning it up will provide additional sustain and buzz. You can also back down the volume control on your guitar for cleaner tone.
- 2. Tone:** This control affects mostly the midrange frequencies. Set it straight up at 12:00 to get a classic fuzz sound. Turn it down (counter-clockwise) for a modern “scooped” tone. Turning it up provides a prominent midrange, bluesy voicing.
- 3. Resonance:** This is essentially a sub-harmonic boost. It allows you to bring up the bottom end without losing bass crispness or causing excessive speaker distortion. Turn it all the way down for traditional fuzz. Turn it up for girth and fatness, or when playing at low volume.
- 4. Volume:** This sets the output level. Set as desired! Plenty of juice is available to overdrive your tube amp.

Plugging into the input jack turns on the power to your Superfuzz.

To preserve battery life, always disconnect the input cable when not in use.

Battery

The Voodoo Lab Superfuzz is powered by a single 9V battery. To replace the battery, remove the four screws which secure the bottom cover.

External Power

The Voodoo Lab Superfuzz can be powered externally with a regulated 9VDC power supply eliminating the need for the internal battery. The external power supply connector is a 5.5x2.1mm barrel with center negative. The Voodoo Lab Pedal Power will power up to eight pedals without any added hum or noise.

Warranty Information

Digital Music Corporation warrants this product against any defects that are due to faulty material or workmanship for a period of five years from the date of original retail purchase. This warranty does not include damage to the product resulting from accident or misuse. This warranty is given to the original purchaser only and it is not assignable to any other person.

If the product should become defective within the warranty period, Digital Music will repair it or replace it free of charge, provided it is returned freight prepaid to Digital Music with a valid RMA (return material authorization) number.

This warranty shall not apply to any goods that have been repaired or altered by anyone other than the manufacturer. There are no warranties which extend beyond the terms described herein.

Should you experience any difficulty with this Digital Music product, contact us as described below. If it is determined that the product must be returned to the factory for repair, you will be issued an RMA and given shipping and packaging instructions.
